

Digsmart Sensitivity Predictor Order Form

Archeological Resources Service has developed a proprietary software package called the **Digsmart Sensitivity Predictor** which allows you to enter key descriptive parameters about your project work site and get an immediate analysis of the likelihood you will need archeological consultation on your project. Parameters entered are simple items you already know like the size of the plot in acres, the hours per day of sunlight striking the parcel, and other parameters about the character of the property.

Our unique program will give you immediate, private feedback on the likelihood that you will encounter cultural or historic resources that could require costly mitigation or redesigns. This is a perfect tool if you are evaluating multiple project sites for your construction project.

To get your FREE copy of the Digsmart Sensitivity Predictor, please fill out the the order form below, and mail it to us with a self-addresses, stamped return mailer for a CD-Rom at:

**Archaeological Resource Services
122 American Alley Suite A
Petaluma, California 94952
ATTN: Digsmart Offer**

If you need rush delivery, please call us at (707) 762-2573
The Digsmart Sensitivity Predictor is compatible with Windows 95, 98, and XP only.

Please tell us a little about yourself and your project:

(All information will be kept strictly confidential).
